

Oct 2007 Vertebrate Sightings - Sandwich Bay Bird Observatory

Mammals are not systematically recorded, the following are therefore casual observations made by our warden and volunteers.

Common seals are regularly seen during our estuary boat trips in the sea and on the river banks. 12 were recorded on 20th and 21 on the 5th.

A brown hare was recorded on New Downs on 12th, with two being seen on the 19th.
