

Sept 2008[<< Back to Sightings](#) | [Printer friendly version](#)

Not many sightings were recorded this month though the most unusual was a Pygmy Shrew running through the observatory office! A Weasel was seen on New Downs and a Stoat on Restharrow. Field Mouse and Water Vole were recorded again this month. The boat trip recorded 21 Common Seal still a good number but not as many as August.

Towards the end of the month a very happy Weasel was seen bouncing across the lane to the observatory car park carrying a good sized mouse (id of species not noted!).
