

As the cold relented at last a trapping session on the 15th produced singles of **Dotted Border**, Dark Chestnut, **Hebrew Character** and **Clouded Drab**. A major improvement took place on the 22nd when an overnight trapping session lured 95 moths of nine species, including a lovely **Oak Beauty** (photo on right by Ian Hodgson), a **Twin-spotted Quaker** and first records of **Common Quaker** (52), **Red Chestnut**, **Early Grey** and **Pale Pinion**.
