

April 2011

A **Common Blue Damselfly** was seen along the Delf Stream on the 20th; in all probability the earliest date locally for this species, a **Large Red Damselfly** in the Elms on the 23rd was a notable local record, a **Hairy Dragonfly** was seen along the Delf Stream on the 24th and a **Broad-bodied Chaser** was seen on the Estate on the 29th; the earliest date we have for this species at the Bay.
