

Feb 2011

Although indifferent weather has kept moth-trapping efforts so far this year to a bare minimum, a trapping session on the 11th produced the first **Early Moth** to have been recorded at the Bay since 1986, **Dark Chestnut**, **Pale Brindled Beauty** and a very early **Engrailed**. **Hebrew Character** was recorded on the 24th and **Satellite**, **Common Quaker** and **Clouded Drab** were trapped on the 25th.
